

Support Decision Making to Maintain Resilient Forests

Project Title	Support Decision Making to Maintain Resilient Forests
Project Summary	Help the beautiful Sierra National Forest explain to our decision-makers and public the potential effects of our actions to avoid large scale fires and insect infestation that are decimating our forest!
Country	United States

Project Description

Your writing and analytical skills will be essential in helping the Sierra manage our 1.3 million acres of wilderness, waterfalls, meadows and wildlife. We are looking for a skilled writer who can help write to the public and explain the effects of different management actions on important resources such as air, water, soil, wildlife, vegetation, and fire. Did you know that fire is good for the forest (under the right conditions)? Did you know we need a certain number of dead trees to support the life of key sensitive and endangered wildlife? Our scientist will provide the analysis and we are looking for a curious and interested writer to translate their information into decision documents that decision-makers, judges and the public can understand and support!

Required Skills or Interests

Skill(s)
Analytical writing
Data analysis
Editing and proofreading
Storytelling/blogging/vlogging
Writing

Additional Information
